Rooting your K1

Before it was allowed by Creality, there was this exploit to get your printer rooted.¹⁾

Now you can use Creality K1 Helper Script²⁾. Start by reading the wiki, it's pretty straight forward.³⁾

The shortcuts are:

- Enable root access⁴⁾
- Connect to the printer using the SSH Tool⁵⁾
- Change the date, time and timezone⁶⁾
- Install the helper script.⁷⁾
- Access the web interface⁸⁾

That's it, you now have a rooted K1
